

Decision Delay Trace Map

A simple map to see where a decision slowed down, then choose one improvement to shorten its journey.

START WITH ONE DECISION

Which decision do we want to trace?

Write it in one short, clear sentence.

Time period

From the first request to the final decision.

From

To

The decision journey in three stages

Capture only what mattered

01

Started

When did it appear, and what needed to be decided?

What started the journey?

Who had it?

Time _____ days

02

Moved

What was the most important step before the decision?

What happened?

Who contributed?

Time _____ days

03

Decided

What was the outcome, and who made the final call?

What was decided?

Who decided?

Time _____ days

The wait

Choose the clearest one

Where did the decision wait the longest?

Name the stage or step

What did it need to move?

Information, approval, clarity, or coordination

Takeaway

We are not looking for someone to blame. We are looking for the shortest useful improvement.

Total decision time

____ days

What is the one improvement we will test on the next decision?

Keep it simple and practical enough to apply within one decision cycle.

Experiment owner

How will we know time improved?
