

The Value Collision Map

Trace where a live investment meets roles, handoffs, and decisions that never changed; then identify the smallest organizational move that releases value.

ONE WORKFLOW ONLY

Capture what actually happens. The aim is to find a changeable collision, not to evaluate people.

Investment promise What result did we expect when the investment began? 	What went live? A tool, system, agent, process, or new capability. 	Who were the target users, and how is it used today? Capture actual use or the current workaround. 	Value expected and value measure ☐ Time ☐ Cost ☐ Growth ☐ Quality ☐ Risk ☐ Capacity
--	---	---	--

Current workflow

Capture only five main steps, from the start of work to the result

01 Start What triggers this workflow? What happens? Who carries it? Tool or information 	02 Second step The first move or handoff. What happens? Who carries it? What does it wait for? 	03 Third step Where the core work happens. What happens? Who carries it? Decision or handoff 	04 Fourth step The final review or handoff. What happens? Who carries it? What sends it back? 	05 Result What actually arrives at the end? Current result Who receives it? Impact today
---	--	--	---	--

Where did value collide with the way work operates? Choose one point in the workflow, then select the closest collision type. ☐ Role ☐ Handoff ☐ Authority ☐ Information ☐ Measure What evidence shows the collision? 	Value blocked What result has not moved, even though the solution is live? Current baseline Expected direction 	Smallest organizational change One change to the role, handoff, authority, information, or measure. Who must participate? When will we test it?
---	--	---

Hold the value release Turn the hypothesis into an experiment with an owner, proof, and date.	Named result owner 01 One person follows the impact of the change. 	First value-release proof 02 What observable change should appear? 	Review date 03 A specific date to review the evidence. 	Stop or escalate condition 04 A clear trigger if the result does not move.
